PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building complete web applications end to end using React, Next.js, TypeScript, and Node.js, with working knowledge of PostgreSQL and Supabase for data and authentication. Comfortable moving from an ambiguous problem to a shipped feature — has architected, built, and debugged frontend and backend as sole or lead developer on founder-led products including a fintech simulation and a crypto-exchange prototype. Product-oriented, learns new stacks quickly, and is based in Nigeria and ready to work independently with a small, high-ownership remote team.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS
Frontend: React, Next.js, Tailwind CSS, responsive web development
Backend: Node.js, REST APIs, NestJS (working knowledge)
Databases: PostgreSQL, Supabase, Prisma ORM (working knowledge)
Tools & Practices: Git, GitHub, API integration, authentication, application architecture, debugging, AI-assisted development, prompt engineering

PROFESSIONAL EXPERIENCE

- Founder & Full-Stack Developer** — TechMindsVerse2025 – Present
 - Own technical direction and full-stack development for founder-led products — including TechMindsVerse OS and EIMB — working across React/Next.js frontends and Node.js/Supabase backends.
 - Design application architecture and data models, and take features from an initial idea through to a working, deployed build as sole developer.
- Co-Founder & Chief Technology Officer** — P2P Pay2025 – Present
 - Lead technical architecture and frontend development for a peer-to-peer crypto exchange product, translating an ambiguous market problem into a working mock MVP used to validate the concept.
 - Coordinate sprint planning and technical decisions with a small cross-functional team (business lead, backend developer), maintaining a consistent architecture across contributors.
- Frontend Developer** — GrowthGia (Startup Team Collaboration)2025
 - Implemented approved UI/UX designs as responsive, production-ready frontend interfaces — including the landing, blog, contact, and merchant pages — collaborating with other developers inside an existing codebase for a logistics/e-commerce enablement platform.
- Frontend Developer** — Client Project — Portfolio Website (React)2025
 - Built and delivered a responsive, production-ready portfolio website for a client using React, translating client requirements into a polished final product.

SELECTED PROJECTS

- EIMB — Educational Digital Banking Simulation**
Stack: Next.js, TypeScript, Tailwind CSS, Node.js, Supabase, PostgreSQL, Prisma
 - Built as sole developer to demonstrate how a modern digital banking platform works end to end: authentication, generated account numbers, internal transfers, saving plans, a referral system, and an admin dashboard.
 - Designed the application architecture and database schema to support realistic banking workflows, and continue to plan production-grade improvements such as email verification.
- P2P Pay — Peer-to-Peer Crypto Exchange (Mock MVP)**
Stack: Next.js, TypeScript, Tailwind CSS, Supabase
 - Designed the product architecture and led frontend development for a functional mock MVP that simulates the target trading experience ahead of blockchain implementation.
 - Used the mock to validate UX and technical direction with an early community of 2,000+ members already trading peer-to-peer manually.

EDUCATION

Federal Polytechnic Nekede — Metallurgical & Materials Science Engineering Technology
OND: 2021 – 2023 | HND: 2025 – 2027 (in progress)

CERTIFICATIONS & TRAINING

- CodeFactory Academy — Full-Stack Development Program, Completed (June 2025 – January 2026)
- Founder Dojo Imo Bootcamp — certified by the UC Berkeley Sutardja Center for Entrepreneurship & Technology
- Google Ads Search Certification — Google
